Introduction

This guide is intended to assist in the preparation of specifications for electrical enclosures. We hope it is easy to follow and gives you the opportunity to upgrade sections that may have been dormant for some time.

With many processes, materials and designs changing we sometimes find the old mixed with the new, resulting in product descriptions that cannot be certified or go beyond the current standards in place.

For further assistance please feel free to contact our manufacturing facility in Guelph, Ontario. Our contact numbers are located on the back cover of this publication.

Intended Use of Electrical Enclosures

Electrical enclosures are designed for commercial and industrial electrical applications and as such should be selected, transported, handled, installed, and re-fabricated by qualified professional electricians. These products are not intended for household applications or use by the general public. All applications of these products should be in accordance with proper inspections, test approvals, warnings, notices, and instructions as indicated by Consumer Product Safety Regulations and all other applicable local, state, provincial, and federal laws.

Hammond Manufacturing supplies enclosures built to the 3rd party specifications (i.e. UL, CSA). Hammond offers no guarantee or warranty as to the applicability of our products outside these specifications. If you have any concerns about the appropriate enclosure selection for your application, please contact Hammond for advice regarding the variables in your particular situation.

What is a Standards Organization?

- Standards organizations create rating measurements for the performance of many different products.
- There are many standards organizations throughout the world, however those most commonly recognized are North American and European organizations.
- Electrical enclosures are rated by organizations like NEMA, CSA, UL and IEC which identify an enclosure's ability to provide protection from dust, dripping water, hose directed water and more.

While these standards are all intended to guide the user to make the right choice of product, there are some important differences between them.

North American Standards

In North America, NEMA, UL and CSA are the most commonly recognized standards organizations.

They are *almost* identical in their rating and testing of enclosures.

UL and CSA

- Provide “certification labels” to be permanently attached inside the enclosures.
- Require that enclosures be tested in an approved lab in order to prove their performance.
- Inspect manufacturers to ensure they use approved materials and build to tested product designs.

NEMA, EEMAC and JIC

- Do not provide “certification labels” for enclosures
- Do not provide testing services or require enclosures to be tested.
- Leave compliance and testing to the discretion of the manufacturer.

JIC Ratings

- JIC or Joint Industrial Commission ratings are standards which (in brief) specify minimum allowable material thickness for various enclosure sizes.

Hammond Enclosure Ratings

In general, Hammond Enclosures are...

- Listed by **UL**
- Certified by **CSA**
- Comply with **NEMA**
- Comply with **EEMAC**
- Comply with **JIC**
- Comply with **IEC**

European Standards

IEC

In Europe, IEC ratings are the most commonly recognized standards for enclosures.

- IEC ratings are similar to NEMA, but the pass or fail requirements are different. (see NEMA to IEC Cross Reference Chart on page 7).
- IEC does not include ratings for enclosures in conditions of corrosion, rust or oil.
- IEC does not provide testing, so testing and compliance is left up to the manufacturer. In Europe, TUV and VDE are two popular testing agencies that manufacturers use.

CE

- CE is a European Union (EU) symbol, which indicates that the product complies with the EU directives or standards for that product.

CE *does not apply to empty enclosures* because enclosures are components of a final assembly. Testing and compliance to EU directives is the responsibility of the final equipment manufacturer.

Dual Standards

UL and CSA have markings available that indicate approvals meet standards of their “non-home” country.

- The cUL mark indicates the product has been tested to meet Canadian Standards by the UL organization.
- The cCSAus mark indicates the product has been tested to meet USA standards by CSA.

National Electrical Manufacturers Association (NEMA Standard 250)	Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment to provide a degree of protection against falling dirt.	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with enclosed equipment to provide a degree of protection against falling dirt, rain, sleet, snow and windblown dust and that will be undamaged by the external formation of ice on the enclosure.	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment: to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, hose directed water, and hose-directed water; and that will be undamaged by the external formation of ice on the enclosure.	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, hose-directed water, and corrosion; and that will be undamaged by the external formation of ice on the enclosure.	Enclosures constructed (without knockouts) for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against circulating dust, lint and fiber flyings; and against dripping and light splashing of liquids.
Underwriters Laboratories Inc. (UL 50 and UL 508)	Indoor use primarily to provide a degree of protection against limited amount of falling dirt.	Outdoor use primarily to provide a degree of protection against rain, sleet, windblown dust, and damage from external ice formation.	Indoor or outdoor use primarily to provide a degree of protection against windblown dust, and rain, splashing water, hose-directed water; and damage from external ice formation.	Indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, hose-directed water; and damage from external ice formation.	Indoor use primarily to provide a degree of protection against circulating dust, falling dirt, and dripping non-corrosive liquids.
Canadian Standards Association (Standard C22.2, Nos. 14, 40 and 94)	General purpose enclosure in ordinary locations.	An enclosure for either indoor or outdoor use, constructed so as to provide a degree of protection against rain, snow, and windblown dust; undamaged by the external formation of ice on the enclosure.	An enclosure for either indoor or outdoor use, constructed so as to provide a degree of protection against rain, snow, windblown dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure.	An enclosure for either indoor or outdoor use, constructed so as to provide a degree of protection against rain, snow, windblown dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure; resists corrosion.	An enclosure for indoor use, constructed so as to provide a degree of protection against circulating and settling dust and lint, fibre flyings; dripping and light splashing of non-corrosive liquids; not provided with knockouts.

Industry and the Products they use

The following is a list of those industries with the enclosures most commonly used by them.

Industry	Examples of Products Used
Utilities, Municipalities (water/waste water)	Industrial Enclosures, Non Metallic NEMA 12 & 4X
Saw Mills, Pulp & Paper, Mining	Industrial Disconnect Freestanding, Corrosion Resistant
Farm, Irrigation Systems	Corrosion Resistant, Non Metallic NEMA 4X
Transportation Industries	Industrial Enclosures, Aluminum NEMA 12 & 4
Marine, Naval, Canadian Forces	Industrial, Freestanding NEMA 4X & 4, Non Metallic & Stainless Steel
General Industries	Industrial Modular Operator Interface
Process Industries (oil, chemical, food processing)	Industrial Corrosion Resistant, 316 Stainless Steel

Corrosion Protection - Mild Steel/Powder Coat

Users of older Hammond Manufacturing catalogs will have noticed a change to the ratings noted for Type 4 painted mild steel enclosures. Previously, Hammond catalogs have shown that these enclosures also carried the Type 4X designation, but this is no longer noted in the catalog. There has been NO CHANGE WHATSOEVER to the quality of the Hammond paint finish. Hammond has removed the 4X approval from the catalog only to avoid misapplication of painted steel enclosures. The testing criteria for Type 4X is not as rigorous as many users may assume.

It is important for users to understand the NEMA 4/4X rating. In response to concern about the costs of corrosion, the Underwriters' Laboratory (UL) and the National Electrical Manufacturers' Association (NEMA) have developed a rating system for electrical enclosures, stipulating that certain minimum conditions of corrosion resistance be met.

Material tested to UL1332 (type 4 protective coating) is prerequisite to a type 4X salt spray test. The NEMA 4X rating is applied to material that has met, under laboratory conditions, a six hundred hour salt spray with no worse pitting than that exhibited on a Type 304 Stainless sample run at the same time. This rating, however, does not test for corrosion resistance beyond this, or with chemicals other than salt.

Corrosion Resistance of Various Enclosure Materials*

		Suitability		
		Limited	Satisfactory	High
Material Type	Acids	Aluminium	Fiberglass Steel - Powder Paint	Stainless Steel Type 316 Stainless Steel Type 304
	Alkalies	Steel - Powder Paint Aluminium	Fiberglass	Stainless Steel Type 316 Stainless Steel Type 304
	Solvents			Stainless Steel Type 316 Stainless Steel Type 304 Fiberglass Aluminium Steel Powder Painted

Acids: Hydrochloric acid, nitric acid, sulphuric acid, acetic acid, magnesium, chloride, sea water

Alkalies: Sodium hydroxide, potassium hydroxide, calcium hydroxide, ammonia, pyridine, hydroxylamine, methylamine

Solvents: Acetone, ethyl alcohol, lacquer thinner, methylene chloride, mineral spirits, turpentine, toluene, unleaded gasoline, xylene

* This chart provides a quick reference but does not address material concentration levels or other environmental impacts. For more detailed information,

Suggested Applications for Corrosion Resistant Enclosures

Material Type	Hammond NEMA Rating	Suggested Application
Stainless Steel Type 304	4X	Indoor/outdoor applications. Ideal for hose-down and wet areas (eg. food processing, water treatment, dairies, breweries, etc.)
Stainless Steel Type 316	4X	Indoor/outdoor applications. Ideal for most environments, especially marine.
Aluminum	4	Indoor/outdoor applications. Ideal for environments containing solvents, petrochemicals, some acids and most sulfates and nitrates. Light weight provides for easier handling.
Fiberglass Reinforced Polyester	4X	Indoor/outdoor applications. Ideal for continually wet, cold or salty environments. Also useful in solvent or chemical laden areas. Strong resistance to heat, dilute acids and bases, impact, fire and outdoor exposure.

Pre-Treatment and Paint Process

Hammond offers a number of standard colors including ASA 61 gray, RAL 7035 and panel white. The ultra durable powder paint is applied to a multi-staged washing, rinsing and phosphating undercoating. Hammond standard finishes can be re-painted and detailed recoating information is published in catalogs and also included with insert sheets shipped with the product.

Hammond has established, documented, implemented, and maintained a quality management system and has continually improved its effectiveness in accordance with the requirements of the ISO 9001:2000 International Standard.

Process	Function
Wash & Rinsing	Cleaning solution aids rinsing agents, prepares surface for conversion coatings
Phosphate Coating	Corrosion protection agent plus surface prep for superior paint adhesion
Powder Coating	Electrostatically applied for uniform coverage on all surfaces edges and recessed areas
Bake Cycle	Baked at 400°F

Baking

Powder Coating Reference Chart

The majority of enclosure suppliers, including Hammond, utilize polyester powder paint in their manufacturing process.

Properties	Polyester TGIC*	Hybrid Polyester	Polyurethane	Epoxy
Outdoor Weathering	Excellent	Fair	Good	Fair
Flexibility	Excellent	Good	Good	Good
Adhesion	Excellent	Excellent	Excellent	Excellent
Chemical Resistance	Good	Good	Good	Good/Excellent
Solvent Resistance	Good	Good	Good	Excellent
Hardness - Scratch Resistance	Good	Good	Good	Excellent

*Hammond Powder Coating

The performance of the various paints listed above can change and is dependent on the variety and effects of the different acids and solvents used.

Two Design Styles

The application or use normally decides the style. For example, if frequent opening is required, the new 1/4 turn contemporary design is faster and easier than removing the compression clamps. If the application demands heavy equipment mounted to the doors or large cutouts that weaken the door structure, a heavy duty traditional style is recommended. Hammond offers a variety of both Traditional and Euro/Contemporary designs with various NEMA ratings, material types and features.

Traditional Design

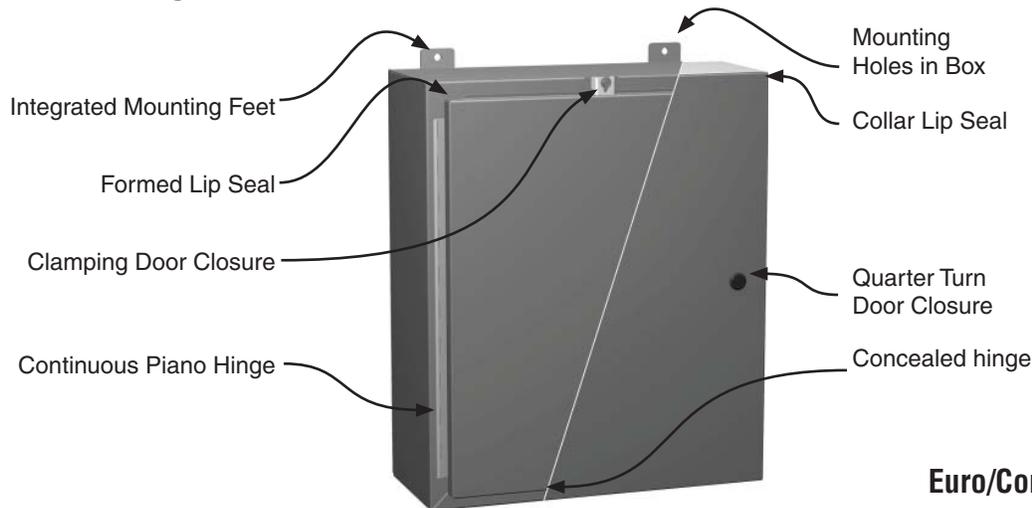

Traditional design is generally heavy duty or severe environment conditions.

Euro or Contemporary Design

Euro/Contemporary design is generally used for appearance, ease of entry or for use with modular accessories.

Writing the Enclosure Specification

This section is designed to provide specification writing guidelines.
The following pages contain:

Step #1 - Specifying the Manufacturer	page 12
Describes why it is important to specify manufacturers.	
Step #2 - Generic Description	page 13
The generic description templates lay out the basic features generally noted on an enclosure specification.	
Step #3 - Detailed Description	page 14
The detailed description templates illustrate the specific product details the designer expects. Traditional and contemporary details are documented for reference.	
Modification Information	page 20
When customers require very specific designs, many manufacturers, including Hammond, offer modification services of their standard product.	

Specifying Manufacturer

Specifying catalog numbers ensure certain features are maintained, or at least illustrated, for those quoting and supplying the product. This also establishes the quality grade from one of the manufacturers being named that could be transferred through to other pre-qualified manufacturers who you deem of equal stature.

Acceptable Manufacturers are:

1. Hammond Manufacturing
2. ...
3. ...

Generic Description Templates

1. Commercial NEMA Type 1 Enclosures - Junction Boxes, Pull Boxes, Splitter Boxes and Troughs

Junction, pull and switch boxes for general purpose, indoor commercial use:

- Must carry CSA label and meet NEMA/EEMAC classification
- Formed and spot welded from 12, 14 or 16 gauge steel
- Screw cover or hinged cover
- Finished in ASA 61 gray powder coating

Splitter boxes and troughs for indoor distribution of up to 600 amp service:

- Must carry CSA, UL or cUL label and meet NEMA/EEMAC classification
- Accommodates either 3 or 4 wires
- Formed and spot welded from 14 or 16 gauge steel, including factory installed splitter blocks
- Finished in ASA 61 gray powder coating

Generic Description Templates...cont'd

2. Commercial Outdoor NEMA Type 3R - Enclosures

General purpose outdoor enclosures are intended for surface mounting and will be of the following minimum standard:

- Must carry CSA, UL or cUL label and meet NEMA/EEMAC Type 4X classification (as required)
- Formed and welded from 12, 14 or 16 gauge steel (preferably galvanized steel)
- Finished in ASA 61 powder coating

3. Industrial NEMA Type 12, 4, 4X - Enclosures and Cabinets

Mild Steel Construction

Enclosures are intended for surface mounting and will be of the following minimum standard:

- Must carry CSA, UL or cUL label and meet NEMA/EEMAC Type 12 or 4 classification (as required)
- General construction shall be of sheet steel with all welds to be continuously finished smooth, free of all burrs, scale and imperfections
- Shall be stiffened to prevent any deformation or bowing during installation and after components are mounted
- All doors are to be formed flush fitting with all welds ground smooth
- Latching as specified with permanent gasket installed
- Supply print pocket for documentation
- Internal mounting panel

Stainless Steel Construction

Enclosures are intended for surface mounting and will be of the following minimum standard:

- Must carry CSA, UL or cUL label and meet NEMA/EEMAC Type 4X classification (as required)
- Unless otherwise specified material to be type 304 or 316 with a brushed finish, depending on application, with all hardware of the same or higher grade
- General construction shall be of sheet steel with all welds to be continuously finished smooth, free of all burrs, scale and imperfections
- Shall be stiffened to prevent any deformation or bowing during installation and after components are mounted
- All doors are to be formed flush fitting with all welds ground smooth, latching as specified with permanent gasket installed
- Supply print pocket for documentation
- Internal mounting panel

Fiberglass Re-inforced Polyester Construction

Enclosures are intended for surface mounting and will be of the following minimum standard:

- Must carry CSA, UL or cUL label and meet NEMA/EEMAC Type 4X classification (as required)
- Manufactured of fiberglass-reinforced polyester with all stainless steel hardware and padlocking provision
- Internal mounting panels will be supported by reinforced fittings

Detailed Description Templates

Small Wallmounts

Size Range - 4x4x3 inches (100x100x75mm) - 16x14x10 inches (400x355x250mm)

Manufacturer shall construct from 14 or 16 gauge sheet steel. All welds are to be continuous, finished smooth and free of all burrs, scales and imperfections. Body shall have integrated mounting feet with ground studs and rear mounting panel. Door shall be removable and have a permanently secured gasket with bonding studs.

Modification Services

When a standard enclosure isn't exactly what you need, Hammond can modify our designs for the ideal enclosure solution. Should you need some assistance specifying your enclosure, our experienced sales and design professionals will share their expertise to help determine which enclosure would best fit your needs. Why have Hammond modify your enclosure?

Wallmount Enclosures

Modular Freestanding Enclosures

*19" Rack Cabinets
Standard and Type 12*

Large Box Enclosures

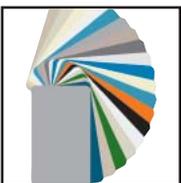

Modular Consoles

There are two good reasons - **quality** and **cost**.

Hammond is a name trusted for enclosure quality for many years. Our highly accurate laser work centers and CNC punches can guarantee the exact location and dimensions of your holes and cutouts. Our ultra-durable powder paint can be color matched to your specifications ensuring a factory quality paint finish every time.

Consider the true costs of modifying enclosures at your factory. When you add up prep time, layout, drilling, tapping, cutting, paint touch up, assembly and the extra product handling, you'll see the value in getting an enclosure from Hammond that's ready to load up.

Warranty Information

Hammond Product Warranty

All goods sold by HAMMOND MANUFACTURING COMPANY INC, are warranted to be free from defects in material and workmanship for a period of one year from date of shipment. This express warranty is in lieu of and excludes all other warranties whether expired or implied by operation of law or otherwise, including any warranty on the merchantability or fitness for a particular purpose. Defective goods may be returned to HAMMOND MANUFACTURING COMPANY INC. After inspection by the Company and upon receipt of definite shipping instructions, goods so returned will be replaced or repaired without charge, provided however, that HAMMOND MANUFACTURING COMPANY INC, shall not be liable for loss, damage or expense directly or indirectly resulting from the use of the product or from any other cause, the exclusive remedy against HAMMOND MANUFACTURING COMPANY INC, being to require the replacement or repair of defective products.

Note: By this warranty, HAMMOND MANUFACTURING COMPANY INC, is not obligated where products have been subject to careless handling, improper application, or faulty installation, and any obligation, guarantee or liability whatsoever except as stated above is hereby expressly disclaimed.
