■ NetShelter® SX Enclosures

- Integrated with APC® InfraStruXure™ products — APC cooling, power distribution and cable management products work seamlessly with the NetShelter SX to provide a complete IT infrastructure support system

- Perforated front and rear doors provide ample ventilation for servers and networking equipment; front door can be moved to opposite side or interchanged with rear doors; doors are easily removed with simple lift-off design

- Overhead cable troughs and data cable partitions install tool-less on the roof of the enclosure, eliminating the need for ceiling mounted or underfloor mounted cable trays

- Enclosures ship standard with leveling feet, casters, side panels, front/rear doors and roof

- Split rear doors improve access and serviceability to rear of rack-mounted equipment

- Add-on Rack Access Control protects IT assets with local or remote control and management of access privileges, including an audit trail
