CROC BLOC

What is Croc Bloc?

Croc Bloc™ is a line of **Sunscreens** and **Insect Repellents** that will protect the worker from health risks associated with over exposure to ultraviolet radiation and the hazards associated with insect bites. **It is the most comprehensive product lines of skin protection attending both, the commercial and home markets.**

Croc Bloc Sunscreen provides superior, wide-spectrum protection against harmful UV radiation. Moreover, dries quickly with no oily residue. While using tools or sports equipment, your grip won't slip and doesn't run into your eyes. It is outdoor protection that's convenient, effective, and easy to use!

Canadian Occupational Safety & Health Regulations

Not many people are aware of the fact that the Canadian Occupational Safety & Health Regulations, under the Canada Labour Code, **Part II Skin Protection**:

(a) A shield screen

(b) A cream to protect the skin; or

(c) An appropriate body covering

Standards and Testing

Croc Bloc products are dermatologist tested, FDA, EPA, PMRA and Health Canada Approved. They have been tested against the industry standards on work gloves and other personal protective equipment and tools.

- Railway Companies
- Hydro Electric Companies
- Poliece & Fire Departments
- Petroleum Companies

Hazard Prevention

Ultraviolet Radiation

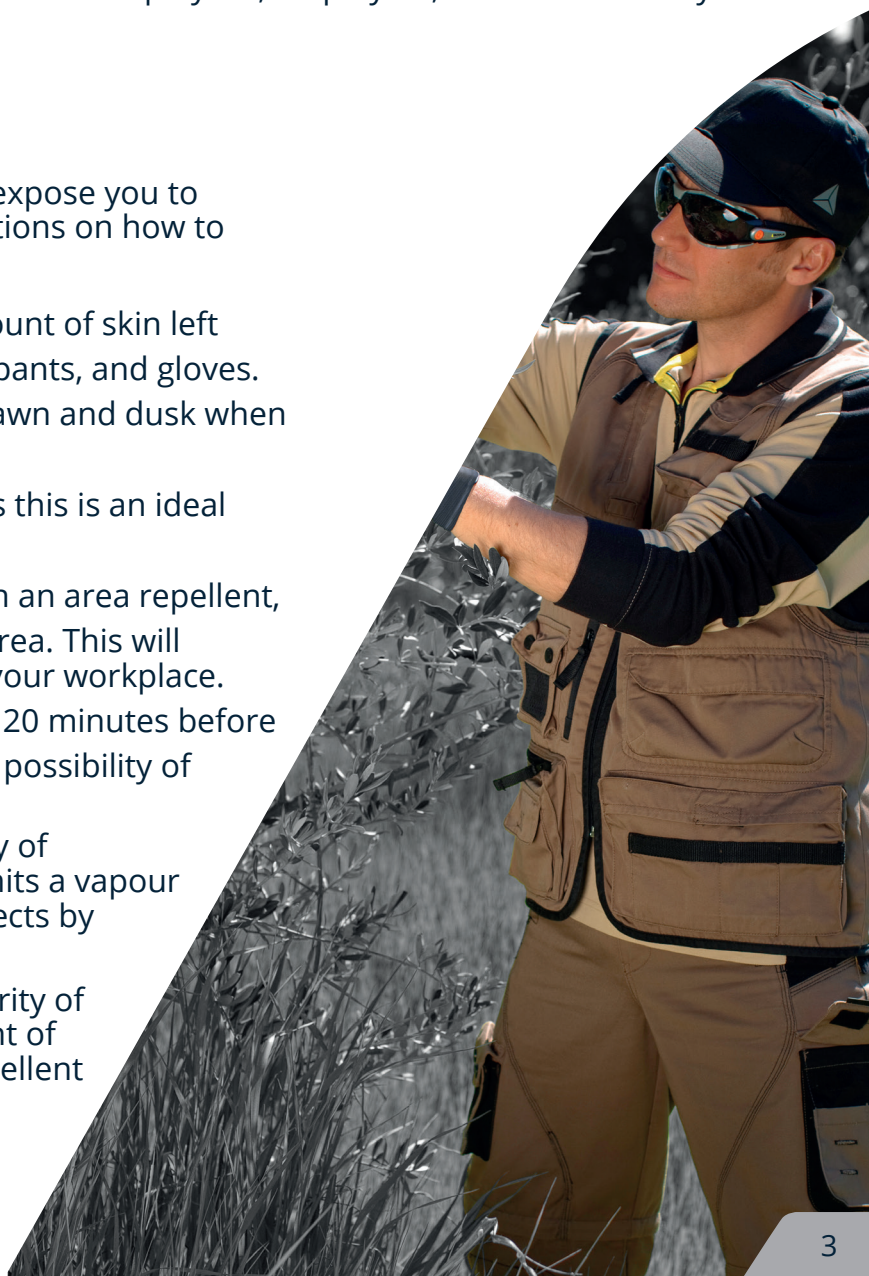
While working in the sun for any length of time, make sure to follow these suggestions on how to protect against sunburn:

- Wear appropriate clothing such as long sleeved shirt, pants and gloves. Wear a hat with a wide brim.
- If wearing a hard hat, you may be able to attach a sun shield that will extend the area of shade around the head and neck.
- Try to reduce your exposure to the sun between 11:00 am and 3:00 pm, when the sun is a its hottest.
- Apply a sunscreen with a minimum SPF of 30, 20 minutes before your exposure to the sun. It is recommended that you use sunscreen that is both, sweat and water resistant.
- Sun Protection Factor (SPF) is the measure of a sunscreen's effectiveness. Indicates how long it will take for UVB rays to redden the skin when using the sunscreen.
- SPF 30 sunscreen allows you to stay in the sun 30 times longer without burning, than without wearing the sunscreen.
- SPF 30 sunscreen effectively **blocks 98%** of the sun's **ultraviolet radiation**.
- SPF 30 is the protection level required by most employees, employers, unions and safety personnel for the outdoor worker.

Insect Annoyance

While working in environments that may expose you to insects, make sure to follow these suggestions on how to protect against insect bites:

- Wear clothing that will minimize the amount of skin left unprotected, such as long sleeved shirt, pants, and gloves.
- Try to minimize your time outdoors at dawn and dusk when mosquitoes are most active.
- Try to avoid working in stagnate water as this is an ideal breading environment for mosquitoes.
- Spray the area you intend to work in with an area repellent, 20 minutes prior to you working in this area. This will help to reduce the amount of insects in your workplace.
- Make sure to apply your insect repellent 20 minutes before your exposure to a workplace where the possibility of insects exists.
- Insect repellents are available in a variety of formulations that include DEET. DEET emits a vapour shield 2-3" above the skin and repels insects by severely irritating their outer body.
- The Pest Management Regulatory Authority of Canada (PMRA) has restricted the amount of DEET that can be offered in an insect repellent to a maximum of 30%.



OUR PRODUCTS

Sunscreen Products
